Community Creation Fix - API Key Optional

Problem Fixed

The community creation form in the Super Admin panel was requiring an API key selection, preventing users from creating communities since this feature is not yet developed.

Changes Made

File: `/workspace/src/components/modals/CommunityModal.tsx`

1. Removed API Key Validation (Lines 108-111)

Before:

```
// API key validation
if (!formData.apiKeyId && !formData.startFromTemplate) {
  newErrors.apiKeyId = 'Please select an API key';
}
```

After:

```
// API key validation - Removed as this feature is not yet
developed
// Making API key selection optional for now
```

2. Removed Required Asterisk from Label (Line 485)

Before:

```
API Key {!formData.startFromTemplate && '*'}
```

After:

```
API Key
```

3. Removed Required Attribute from Select Field (Line 493)

Before:

```
<select
  // ... other props
  required={!formData.startFromTemplate}
>
```

After:

```
<select
  // ... other props
>
```

Verification Tests

✅ **Test 1**: Community creation without API key - PASS
✅ **Test 2**: Community creation with API key - PASS
✅ **Test 3**: Validation still works for required fields (name) - PASS
✅ **Test 4**: Validation still works for invalid data (color) - PASS

Manual Testing Instructions

Prerequisites

1. Server is running at: `http://localhost:5174/`

2. Have Super Admin credentials ready

Test Steps

1. **Navigate to Super Admin Panel**
   - Open browser to `http://localhost:5174/`
   - Log in as Super Admin
   - Go to Communities section

2. **Test Community Creation #1**
   - Click "+ Create New Community" button
   - Fill in:
     - Community Name: `Test Community Alpha`
     - Project Name: `Alpha Project`
     - Brand Color: `#3B82F6` (default)
     - API Key: **Leave empty** (this should not block creation now)
     - Enable Forum: Check/uncheck as desired
     - Click "Create Community"
     - **Expected**: Community should be created successfully

3. **Test Community Creation #2**
   - Click "+ Create New Community" button again
   - Fill in:

     ◦ Community Name: `Test Community Beta`

     ◦ Project Name: `Beta Project`

     ◦ Brand Color: `#FF6B35` (orange)

     ◦ API Key: **Leave empty**

     ◦ Enable Forum: Opposite of first test

     ◦ Click "Create Community"

     ◦ **Expected**: Second community should be created successfully

4. **Verification**
   - Both communities should appear in the communities list
   - No errors should occur during creation
   - API Key field should no longer show asterisk (*)
   - Form should submit without API key selection

Expected Results

- ✅ Community creation works without API key selection

- ✅ No validation errors for empty API key field

- ✅ No asterisk (*) shown on API Key label

- ✅ Both test communities created successfully

- ✅ Other validations (name, color) still work properly

Files Changed

- `/workspace/src/components/modals/CommunityModal.tsx`

Testing Status

- [x] Code changes implemented
- [x] Validation logic tested programmatically
- [ ] Manual UI testing (pending user verification)

Note: The API key feature can be re-enabled in the future by reversing these changes and implementing the actual API key management functionality.
